

ChMe

Promotion Token Whitepaper

I. Project Background & Overview

1.1 Background

In the current crypto market, Meme tokens possess high viral potential but often lack long-term value support, leading to "pump-and-dump" cycles.

The goal of ChMe is to **leverage the viral nature of MEMEs** combined with a **verifiable redemption** and **lock up mechanism** to:

- Attract short-term speculators.
- Accumulate long-term users and liquidity for the platform.
- Quantify the marketing efforts of community members into tangible value.

Promotion token Model

This is a game of collective will:

The more people choose to become long-term believers in \$Ch, the more generous the USDC rewards will be for the remaining \$ChMe promoters. This establishes a dual-token redemption mechanism never before seen in the market.

1.2 Project Objectives

- Incentivize short-term players to actively promote the project.
- Boost platform exposure and community activity.
- Gradually convert short-term meme players into long-term platform supporters.

1.3 Core Design Concepts

- **\$ChMe as a Free Gift**
- **Proof of Promotion:** Converts "Sharing, Promoting, and Participating" into potential income.
- **Redeem to Lock up:** Creates a one-way deflationary model.
- **Ecosystem Funnel:** Guides users toward holding and using the platform token, \$Ch.

1.4 Psychology & Marketing Logic

- **FOMO & Instant Gratification:** Leverages the fear of missing out and the desire for quick returns.
 - **Marketing Realization:** Players understand that "Sharing = Increasing Redemption Value."
 - **Viral Effect:** Low cost, high diffusion, creating a snowball effect.
 - **Freedom of Choice:** Users are not forced to hold long-term; they are given the power to choose their exit strategy.
-

II. Tokenomics

2.1 Total Supply

- **Total Supply:** 50,000,000 \$ChMe
 - **No Additional Minting:** Supply is hard-capped.
-

2.2 Token Allocation

Category	Ratio	Description
Gift Pool	90%	Directly listed in the Gift Pool for distribution via the game "Cheap Tycoon."
Team	10%	Reserved for testing, events, and community incentives

2.3 Distribution Criteria

- **Standard:** Distributed according to the terms in the game *Cheap Tycoon*.
 - **Events:** The team may host special activities and grant tokens based on specific criteria.
-

III. Redemption & Burn Mechanism (The Core Engine)

3.1 Redemption Timeline

Upon the official launch and operation of the **Ch Platform**, redemption functions for \$ChMe will be opened progressively.

Sequence of Events:

Open \$Ch (Platform Token) Redemption.

⇒ Close \$Ch (Platform Token) Redemption.

⇒ Open USDC (Stablecoin) Redemption.

3.2 Redemption Options (Choose One of Two)

For every **1 \$ChMe**, a holder can choose **ONLY ONE** of the following:

1. **Redeem for Platform Token \$Ch:**

$$1 \text{ \$ChMe} = 1 \text{ \$Ch}$$

(Whitepaper for \$Ch to be released separately).

2. **Redeem for Stablecoin USDC:**

$$1 \text{ \$ChMe} = X \text{ USDC.}$$

(X is a variable determined by the smart contract algorithm).

Crucial Note: Once redeemed, the \$ChMe is permanently locked in the smart contract account. This action is **irreversible**.

3.3 The Redemption Algorithm (For USDC)

Single ChMe to stablecoin exchange price (X)

$$= \frac{\text{the amount of "USDC" in the Redemption pool}}{\text{the total amount of "ChMe" currently not locked}}$$

3.4 Scarcity & Deflation Logic

- Every 1 \$ChMe redeemed is permanently locked.
 - Circulating supply can only decrease, never increase.
 - No mechanism exists for refilling or re-minting.
-

3.5 The Redistribution Effect (Key Design)

When a user chooses

1 \$ChMe → 1 \$Ch

they forfeit their right to redeem USDC.

However:

1. The **Total USDC** in the pool remains unchanged.
2. The **Total \$ChMe** eligible to redeem USDC **decreases**.

The Result: The USDC redemption value for every remaining \$ChMe rises accordingly.

Conclusion: The more people support the platform by swapping for \$Ch, the higher the redemption value for those remaining in \$ChMe

3.6 Illustrative Examples

The following examples use hypothetical numbers for clarity and do not represent actual guaranteed amounts.

- **Example A:**

- Assume 500,000 USDC in the pool.
- 25,000,000 \$ChMe have been swapped for \$Ch (locked).
- 25,000,000 \$ChMe remain unredeemed.
- **Calculation:** $\$500,000 / 25,000,000 = 0.02\$$.

Result: Redemption price doubles from 0.01 USDC to **0.02 USDC**.

- **Example B:**

- Assume 500,000 USDC in the pool.
- 49,999,000 \$ChMe have been swapped for \$Ch (locked).
- Only 1,000 \$ChMe remain unredeemed.
- **Calculation:** $\$500,000 / 1,000 = 500\$$.

Result: Redemption price skyrockets by **50,000 times** to **500 USDC per token**.

(The actual amount of USDC price X will be determined based on the circumstances at the time of the event.)

(This activity does not constitute an investment and does not guarantee any returns.)

IV. Operational Uncertainties & Technical Statements

In order to ensure the project's long-term sustainability and compliance, all participants are required to fully understand and acknowledge the following uncertainties associated with the operation of \$ChMe:

4.1 Non-Fixed Pool Funding

The amount of USDC in the pool is not fixed. Sources may include platform/game revenue, partner sponsorships, or community donations. The platform does not guarantee the total amount at any specific time nor is it obligated to maintain a specific reserve.

4.2 Timing Uncertainty

Redemption features will be opened based on platform operations, market environment, and regulatory compliance.

The platform reserves the right to delay, suspend, or cancel redemptions without liability for damages.

4.3 Technical Aspects of Smart Contract Deployment

The automated exchange logic of \$ChMe relies on the deployment of blockchain-based smart contracts.

Deployment Timeline: The development, auditing, and official deployment of smart contracts involve inherent technical uncertainties.

Technical Risks: In the event of blockchain network congestion, hard forks, or unforeseeable technical vulnerabilities (force majeure-related), the platform reserves the right to adjust the exchange logic or replace the contract address in order to safeguard asset security.

4.4 Right of Phased Termination

The platform reserves the ultimate right to terminate all \$ChMe-related activities and exchange functionalities under circumstances including, but not limited to, extreme market volatility, significant changes in regulatory environments, or insurmountable technical limitations.

V. Legal and Value Disclaimer

1. Non-Investment Declaration

\$ChMe (hereinafter referred to as the “Token”) is provided solely as a free reward for platform marketing activities and for the game *Cheap Tycoon*. The Token is not an investment product and does not possess any characteristics of an investment, savings, insurance product, or any instrument similar to securities.

2. Nominal Value and Financial Recognition

For all accounting, legal, and tax reporting purposes, the nominal value of the Token is set at **USD 0.0000001** (or the equivalent in local currency). Holders of the Token shall not assert any legal claim or entitlement exceeding this nominal value.

3. Nature of the Exchange Mechanism

Non-Mandatory Obligation:

The exchange functionality provided by the platform (including exchanges for \$Ch or USDC) constitutes a voluntary community incentive offered by the platform and does not represent the fulfillment of any contractual obligation.

Dynamic Variability:

The size of the pool and the final redemption price are directly influenced by market participant behavior, including but not limited to burn rates and exchange preferences. The platform does not guarantee any specific redemption price nor the continuous availability of sufficient liquidity in the pool.

Irreversibility:

Once a user confirms an exchange and the \$ChMe tokens are burned, the transaction is deemed final on the blockchain. No cancellation, reversal, or refund may be requested.

4. Limitation of Rights

Holding the Token does not grant the holder any of the following rights:

- Any shares, equity, ownership interest, or voting rights in the platform or its affiliated entities.
- Any entitlement to interest, profit sharing, or guaranteed returns.
- Any right to participate in or influence the platform's operational or management decisions.

5. Geographic and Eligibility Restrictions

The promotional activities related to the Token are not available to citizens, residents, or taxpayers of restricted jurisdictions, including but not limited to the United States, China, and any other jurisdictions that explicitly prohibit virtual asset transactions. Users are solely responsible for ensuring that their participation complies with all applicable local laws and regulations.

6. Assumption of Risk

The cryptocurrency market involves high volatility and technological risks. Users should fully understand the operational mechanisms of this project and acknowledge that the value of \$ChMe may approach zero due to factors including, but not limited to, insufficient community participation, technical failures, or changes in regulatory environments.

7. Right of Final Interpretation

The project development team reserves the final right to interpret, modify, or terminate the Token distribution mechanism, exchange schedule, and the contents of this whitepaper. Any updates will be announced through official channels without separate or individual notice.

Important Notice: Technical Deployment and Exchange Timeline

The deployment, testing, and activation timeline of the project's smart contracts and phased exchange functionalities—including but not limited to the exchange of platform tokens (\$Ch) and the stablecoin USDC—are not subject to any fixed schedule.

The specific launch progress of each feature will be announced separately by the official channels based on the status of technical development, security audits, and changes in market conditions.

The project reserves the final right to dynamically adjust, postpone, suspend, or reorder the activation sequence, timing, and rules of any functionality. By receiving or holding \$ChMe, participants acknowledge that they have fully understood and accepted the uncertainties inherent in technical development and agree not to use such uncertainties as the basis for any legal claims.

Legal Disclaimer and Risk Disclosure

1. Non-Financial Product Statement

This whitepaper is provided for informational purposes only and does not constitute a prospectus, investment solicitation, securities offering, or any recommendation to purchase financial products. Holding or acquiring the token (hereinafter referred to as the “Token”) does not represent ownership of shares, debt interests, voting rights (except for explicitly defined governance functions), or dividend rights in the Company, its affiliates, or any other entity.

2. Information Accuracy and Limitation of Liability

All technical descriptions, roadmaps, and plans related to this project are provided on an “as is” basis. The development team makes no representations or warranties regarding the completeness or accuracy of the contents of this whitepaper.

To the maximum extent permitted by law, the development team, founders, and related members shall not be liable for any direct or indirect losses arising from the use of or reliance on this document, or resulting from market volatility, technical vulnerabilities, or cyberattacks, including but not limited to loss of profits or data.

3. Forward-Looking Statements and Risks

Any plans, projected development timelines, and future features described in this document constitute “forward-looking statements.” Such statements are subject to risks and uncertainties related to technical development challenges, regulatory changes, and market conditions.

Actual outcomes may differ materially from those described herein. The development team reserves the right to modify, update, or discontinue the development of any feature at any time without prior notice.

4. Class Action Waiver — Important Notice

By participating in this project or holding the Token, you expressly agree that any dispute arising out of or relating to this project, this document, or related services shall be resolved through individual arbitration only.

You waive any right to participate as a plaintiff or class member in any class action, class arbitration, or representative proceeding. You further agree not to consolidate or combine claims with other token holders or pursue any joint legal action of any kind.

5. Dispute Resolution and Jurisdiction

Any dispute arising in connection with this document shall first be resolved through good-faith negotiation. If such negotiation fails, the dispute shall be submitted to final and binding arbitration in **Taipei**. The arbitral award shall be final and legally binding upon all parties.

6. Restricted Jurisdictions and Compliance

This project is not available to residents of jurisdictions that prohibit cryptocurrency trading, token sales, or are subject to international sanctions, including but not limited to the United States, Mainland China, and North Korea. Users are solely responsible for ensuring that their participation in this project complies with all applicable local laws and regulations. Any consequences arising from violations of local regulations, including asset freezes or legal actions, shall be borne solely by the user.

7. Assumption of Risk

The cryptocurrency market is highly speculative and involves extremely high risks. Participants are expected to possess sufficient technical expertise and risk tolerance.

If you are unable to bear the risk that this Token may become entirely worthless (with a value of zero), you should immediately discontinue reading this document and refrain from participating in this project.

Official Token Address

The official ChMe token is built on the Solana blockchain. You can find the verified deployment address below:

- **Mint Address:**
 - E7Ke45xzU6zrzaHKWmZ1ohYoEda75jjzoyoe62Uei7xP
- **Solana Explorer:**
